How to use our orgonite garden sets

Orgonite garden pucks are designed to support healthier, stronger plant growth by working with natural orgone energy, a concept originally studied by Dr. Wilhelm Reich.

Research and modern experience suggest that plants grown near orgonite often:

- Grow faster
- Show stronger stems, roots, and leaves
- Resist stress from weather, soil imbalance, or EMF exposure
- Produce richer blooms, fruits, or vegetables

2. How to use orgonite in your garden

1 . Place orgonite pucks in the soil

- Bury or partially bury one puck in each plant bed, pot, or garden zone.
- For larger areas, space several pucks evenly throughout the soil.
- You can also place one puck directly beside each plant or tree root system.

2. Use in potted plants

- Set one puck inside the pot or underneath the planter.
- Works for indoor plants, balcony pots, herb gardens, and seedlings.

3. Use in raised beds or crop rows

- Place 2–4 pucks throughout the bed, depending on size.
- Many gardeners place one puck in each corner for full energetic coverage.

3. Why it works

Orgonite is believed to convert stagnant or harmful energy into balanced, life-promoting energy. Early experiments by Dr. Wilhelm Reich showed that seeds stored inside an orgone accumulator grew stronger and healthier than seeds in normal conditions.

Today, gardeners report similar results using orgonite outdoors:

- Fuller growth
- Improved soil vitality
- Fewer weak or stunted plants
- Visible difference between areas with and without orgonite

4. Care and durability

- Garden pucks are weather-resistant and safe for outdoor use.
- They do not dissolve, expire, or require charging.
- Simply place and leave, the orgonite works continuously.

5. Tip for best results

Combine orgonite garden pucks with:

- Clean or structured water
- Natural sunlight
- Organic soil or compost for the strongest plant response.

Summary

Our orgonite garden pucks are designed to support healthier, stronger plant growth by harnessing orgone energy, first discovered by Dr. Wilhelm Reich. His early experiments showed that seeds placed inside an orgone accumulator grew faster and more vibrantly than those in normal conditions.

Today, people use orgonite in their gardens for the same reason. When placed in soil or around garden beds, orgonite helps plants thrive with fuller growth and richer color.

In side-by-side comparisons, garden beds with orgonite consistently show healthier plants than those without it, clearly revealing the difference orgone energy can make.
